PROFESSIONAL SUMMARY

James is a Business Accounting Graduate with an unquenchable interest in Data, Web, Technology, and Products. Currently building a career in software development with a focus on Javascript, NodeJS, Wordpress , React.

I have the right blend of research and industry skills needed to build technological solutions based on data to solve problems. To this end, I recently joined hands with an SEO Webmaster on a project focusing on sales data visualization and general business evaluation of a top e-commerce website in India, Asia, developing a consumer journey analysis across sales points, pricing and timing. This provided a useful and valuable insights that improved the conversion rate by 20% thereby increasing revenue.

I have also helped several individuals build websites for their businesses in order to help them improve sales and increase their discoverability. I have built several websites in the and still working on projects.

My core strength is using NodeJS to power applications on the backend, using postman to build and test API's and using wordpress to make ecommerce websites. Also, I am proficient at using React to make quality web applications. My objective now is to find a suitable working environment that will contribute to my professional development.

Overall, I am committed to work, project deadlines and deliverables.

CORE SKILLS

✔ HTML5 || CSS || Bootstrap || Tailwind
